**CARPET GRASS**  
LAWN SEED

Searles® Carpet Grass Lawn Seed is a coated seed that forms a dense, low profile lawn, which grows well in tropical and sub-tropical climates.

Carpet Grass is used in commercial and home gardens, particularly in areas of poor and low fertility soils, plus will tolerate wettish and persistent damp soils. Carpet Grass is a perennial ground cover and is effective for suppressing weeds.

**DIRECTIONS FOR USE**

**1 PREPARE**

**For new lawns & bare spots:** Remove debris, then rake the top 15cm of soil to loosen and smooth top layer.

**For oversowing & thin areas:**

Mow existing grass as short as possible followed by removing debris. Then rake the soil to loosen and smooth top layer.

**2 APPLY FERTILISER**

Use a starter fertiliser at the recommended rate like Searles® Lawn Food.

**3 APPLY SEED**

Spread the seed evenly using a drop, rotary, or hand-held spreader according to the recommended settings. Rake gently to work seed and fertiliser into the soil.

**4 WATER**

Keep the soil moist by watering with a fine spray daily as needed until grass sprouts and reaches about 5cm in height.

**5 MOW**

Mow when reaches 6-7cm. Carpet Grass performs best at a height of 5cm and will require regular mowing in the summer months.

**MAINTENANCE & TIPS**

- **Best sown in spring and summer** with minimum soil temperature of 20°C for ideal germination, in tropical and sub-tropical areas.
- **Germination will occur within 7-21 days**, depending on weather impacts.
- **Lawn will need more than 60% full sun** for maximised growth.
- **If uneven establishment occurs**, cultivate bare patches and apply more lawn seed.
- **Regular application of Searles® Lawn Food** will ensure a healthy lawn.

Store in a cool dry place, away from direct sunlight. Any unused seed can be stored in a closed container. Store out of reach of children.

Germination and lawn performance will vary due to many factors. All Searles lawn seeds are tested to an industry standard of minimum germination rate of 85%. Environmental factors such as climate and weather, soil types and general application and fertilising processes may vary performance.
